

EOP MEDICINE(D's)
5th year
2009

1- Evaluation of the ankle jerk center Involve all the following
Except :

- a) Tibial nerve
- b) L4
- c) L5
- d) S1
- e) S2

((we asked dr.Melebari about above question and he said there
are 2 correct answers !!))

حتى القسم قال انه خطأ

2- Non metastatic manifestation of bronchogenic carcinoma
include all the following except:

- a) Myasthenia graves
- b) Hirsutism
- c) Polymotorneuropathy
- d) Dermatomyositis
- e) cerebral degeneration

3- 23 years old Chadian female patient was brought to the hospital
because of progressive worsening dysuria which noticed over
the last 1 week . She lost 15 kg within the last 3 months and
had poor appetite . She complains from diarrhea in the last 2
weeks . Examination showed cervical lymphadenopathy . What
is your diagnosis:

- a) lymphoma
- b) AIDS
- c) TB
- d) Brucella
- e) Syphilis

- 4- Interruption of motor pathways in the internal capsule(subcortical stroke) on one side causes :
- spastic paralysis on the same side
 - spastic paralysis on the opposite side
 - flaccid paralysis on the same side
 - flaccid paralysis on the opposite side
 - flaccid paralysis on both side
- 5- 30 years old female patient complaining of jaundice and itching . Examination showed xanthalsmus in palmar creases and the eyes.What is your diagnosis :
- hemochromatosis
 - 1ry biliary cirrhosis
 - HBV
 - HCV
 - Wilson disease
- 6- Two weeks after a viral infection, A 12 year old girl present to the clinic complaining of drooping of her mouth for several days . She unable to complete close her left eye . Her smile was asymmetric (mouth deviated to the RT side) What is your diagnosis :
- Gillian Bare syndrome
 - Bell's palsy
 - Brainstem tumor
 - Cerebral vascular accident
 - Botulism
- 7- When examining a patient with a high level of direct bilirubin all are useful signs in guessing the diagnosis except :
- a palpable gall bladder
 - An upper abdominal paramedian scar
 - Irregular hard liver
 - Upper midline abdominal mass
 - Scratching marks

8- 32 years old women complained of Jaundice and itching . What is the 1st choice of investigation :

- a) plain abdominal x-ray
- b) abdominal US
- c) cholecystogram
- d) abdominal CT scan
- e) MRI

9- All of the following are recognized causes of pulmonary fibrosis except?

- a- sarcidosis.
- b-myelofibrosis.
- c-bleomycin.
- d-connective tissue disease.
- e external radiation for the carcinoma of the breast.

10- 50 year male pt with pheochromocytoma, which is true:

- a- when you give glucagon, increase plasma catecholamine's.
- b- Increase 24 hrs urine levels of catecholamines.
- c- ?
- d- Less than 1% chance of malignancy.
- e- More than 3% bilateral.

11- What is the most common organism involved in SBP?

- a- st.pneumoniae.
- b- Pseudomonas.
- c- Proteus.
- d- Klebsiella.
- e- E.coli.

12- Hypoalbuminemia happens in all except:

- a) nephrotic syndrome
- b) Liver disease.
- c) Malabsorption syndrome
- d) Protein losing enteropathy
- e) Pyelonephritis

13- 30 years old female pt with MR + MVP developed fever, anorexia, weight loss after she had dental procedure. The most likely diagnosis is:

- a) subacute infective endocarditis
- b) Dental abscess
- c) Lobar pneumonia.
- d) Acute rheumatic fever.

14- All of the following investigation results are true in DKA Except :

- a) High HCO₃ .

15 – Unstable angina , all true except :

- a) Triggered by exercise and relived by rest.
- b) High cardiac enzymes .
- c) Retrosternal pain >1h .
- d) CVS examination is always normal

16- Ulcerative colitis is complicated by all except:

- a) Sacroilitis.
- b) Cologastric fistula.
- c) Polyarthritits .
- d) Iridocyclitis .
- e) Pyoderma gangrenosum .

17 - +ve Traussue's and Chvostek sign indicates :

- a) Hypocalcaemia.
- b) hypocalcaemia & hypomagnesemia

18 – the most common site of enlarged lymph node in Hodgkin's lymphoma is :

- a) Cervical L.N.

19 – The characters of 1ry focus of TB in the lung involve all of the following except :

- a) Initially exudates.
- b) Spread to local L.N.
- c) Near the pleura.

d) non-caseating.

e) In the lower part of the upper lobe.

20- the most common cause of lung abscess :

a) Cystic fibrosis.

b) Pneumonia.

c) Aspiration of a foreign body .

21- All of the following are 1ry prevention except :

a) Pharmaceutical treatment.

22- All true about CRF except :

a) Hyper Ca.

23 – Case about SOB + syncope :

a) Aortic Stenosis.

24 – Most common cause of **subarachnoid hemorrhage** is :

a) Congenital aneurysm.

b) Acquired aneurysm

c) a-v malformation

25- All are sings of severe asthma except :

a) Pulsus alternalis.

26 – Most common causative organism of pneumonian chronic bronchitis is :

a) Pneumococcus.

b) Hib.

27 – All can cause haemoptysis except :

a) Viral pneumonia.

b) Adenocarcinoma.

c) Bacterial pneumonia.

28 – All true except :

a) AIDS vaccine.

In the key answer it is pneumococcal vaccine just they didn't notice
That there is no AIDS vaccine yet >

29 – All DO NOT cause clubbing except :

a) Cystic fibrosis.

30- (Case of typical pneumonia + rusty sputum) the causative organism is :

a) Pneumococcal pneumonia.

31- In above case you'll find all except :

a) Decreased vocal fremitus.

32- All are complication of infective endocarditis except :

a) Peripheral neuropathy.

b) Anemia.

c) Leg ulcer.

33- Characteristic for Mitral Stenosis :

a) The wider the opening snap , the more severity.

b) Graham steel murmur.

c) Presented as AF.

34 – (Case of urine catheter) the most common complication:

a) Urosepsis.

35 – All cause splenomegaly except :

a) Pernicious anemia.

36 – (Case of Increased MCV , Pancytopenia) the diagnosis is :

a) CML.

b) Pernicious anemia.

37 – All are major criteria of Rheumatic fever except :

a) Prolonged PR interval.

38 – (Case of bleeeeeeeding ??) the diagnosis :

a) Hypovolumic shock.

39 – (Case of DM with white plaque in the tongue) the most common cause is :

a) Candida.

40 – Cyanosis is clinically detected when HB is reduced by :

a) 1 g/dl

b) 3 g/dl

c) 5 g/dl

d) 7 g/dl
